## Summary

Software engineer who builds AI agents, Claude Code workflows and RAG applications using TypeScript, Node.js and Next.js.

## Experience

**Horizontal Digital** June 2025 – Present
*Software Engineer* *Vadodara, Gujarat*

- Transitioned the full software development lifecycle into an AI-based pipeline on **Claude Code**, from Figma and requirements through build, QA and release on **SitecoreAI**.
- Contributed to an **autonomous ticket-delivery agent** on **Claude Code**: it triages open tickets, then an unattended runner takes each assigned ticket in a fresh Claude Code session, delivers it on its own branch behind guard gates and spend caps, writes a full run record, and also runs component discovery, builds and QA handoffs that end in a draft pull request.
- Built and maintained the **project knowledge base** that agents read before they act: topic pages with distilled rules, dated session logs and decision records, so lessons from one ticket carry into the next.
- Contributed **Claude Code skills, specialist sub-agents and slash commands** (SitecoreAI, serialization, Figma, analytics, accessibility, git) that take a ticket or a component build from brief to pushed branch.
- Delivered components on **SitecoreAI** with **Next.js and TypeScript**, working from Figma, functional specs and the existing site, and generated component documentation from one structured spec so docs and builds stay in step.

## Projects

**Ozwa** | *Next.js, TypeScript, Node.js, SitecoreAI, Figma API, Claude Code, Playwright* 2026

- End-to-end **AI workflow platform** that builds components straight from Figma into SitecoreAI: Claude Code agents extract the design, model the content, build the Sitecore items and the Next.js component, and QA the result against Figma property by property.
- **Dashboard-driven**: creating a project from the hub board sets up the GitHub repo, design tokens, SitecoreAI site and head app, then plans the components from the Figma file and writes a functional spec for each.
- Backend, frontend and QA agents take each component through six steps, with a person approving the content model, the Sitecore write and the final sign-off; Playwright, accessibility and ±1px fidelity checks run on every build.

**Knowledge Assistant** | *Next.js, TypeScript, Supabase (Postgres, pgvector, RLS), Groq, Vercel AI SDK* GitHub 2026

- Built an internal **RAG chat assistant** where employees ask questions across HR, IT and per-project knowledge bases and get streamed answers with citations to the source document and page.
- Implemented **hybrid retrieval**: pgvector semantic search (MiniLM, 384-dim) plus Postgres full-text search fused with **Reciprocal Rank Fusion**, with recent turns used to rewrite vague follow-ups; added a four-model Groq fallback chain for rate limits and provider errors.
- Enforced access with **Row Level Security** (project knowledge bases restricted per user, company-only signup checked in a database trigger) and built ingestion from Google Drive, Confluence and file upload, plus an admin panel for sync and user access.

## Technical Skills

**AI / Agents**: Claude Code (skills, sub-agents, hooks, MCP), prompt and context engineering, RAG (hybrid retrieval, pgvector), LLM APIs (Groq, Vercel AI SDK), agent guardrails
**Languages**: TypeScript, JavaScript, Python, SQL, HTML5, CSS3
**Full Stack**: Next.js, React, Node.js, Express, REST and GraphQL APIs, Supabase / PostgreSQL (pgvector, RLS), Tailwind CSS, SitecoreAI
**Databases**: PostgreSQL, MongoDB, MySQL

## Education

**A D Patel Institute of Technology** **2021 – 2025**
*Bachelor of Science in Computer Science (CGPA 8.20)* *Anand, Gujarat*

## Certifications

- **SitecoreAI CMS Certified Developer**
- **Claude with the Anthropic API**
- **Introduction to Model Context Protocol**
- **Claude Code in Action**
- **Introduction to Agent Skills**
